

Optimize With and Without Robots.

The first step in automating your warehouse is optimizing the movement of your goods. Whether they are coming into the warehouse to be stored or moving out to be shipped to customers, there are many points of efficiency to realize along the way.

That's where iVia Logic comes in. It's our warehouse fulfillment software suite that lets you speed up your order processing and increase your order accuracy. And our iVia PickMate tool is how your people use the intelligence iVia Logic creates.

We've created a simple, intuitive tool to direct warehouse workers to quickly and accurately pick and place goods that are moving through the order process.

INVIA LOGIC
AI-Driven Software

INVIA PICKMATE
Simple Mobile Tools

INVIA PICKER
Robotic Automation

ROC
Remote Operations

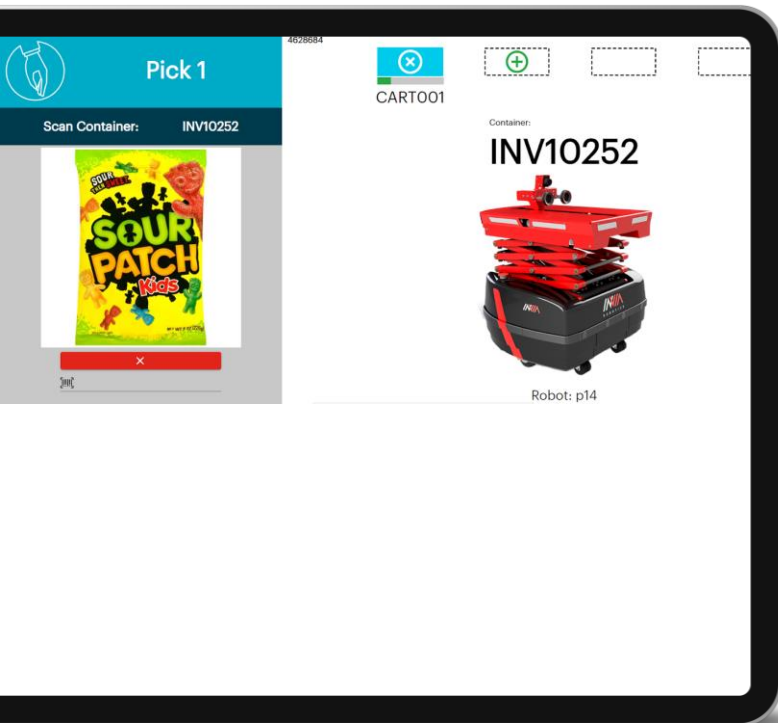

Non-robotic Picks

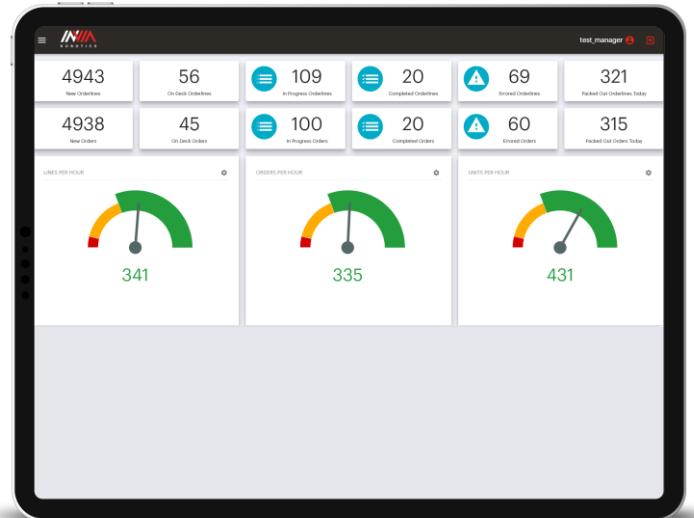

Our subscription-based system isn't just hardware, software, or remote oversight. It's all of the above, working together seamlessly to optimize your operations. Nimble robots, powerful AI-driven optimization software, and 24/7 proactive monitoring all dramatically increase productivity.

inVia PickMate features:

- **Robotically delivered picks** - inVia Picker robots deliver inventory to a sortation station where your people are directed on how many units to pick and which order bins to sort them into.
- **Non-robotic picks** - Ideal for pallet picking or oversized items, your people are directed where to find SKUs and which order bins to sort them into.
- **Device agnostic** - Works on any mobile computer.
- **Intuitive user interface** - Designed to require minimal training so workers quickly grasp assigned tasks and are productive immediately.
- **Simple visual cues** - Designed to use spatial and color prompts to allow for quick and fluid movements. Pick, place, repeat.
- **Intelligent data capture** - System-generated prompts to accurately identify damaged, missing, or misplaced inventory.
- **Ideal density** - Our warehouse analysis will uncover wasted space and dynamically identify optimal SKU location based on order patterns.
- **Business intelligence** - Our dashboards give you easy access to real-time data on fulfillment progress at the warehouse level, as well as detailed views into order status down to the order line level.
